### TEST COMMENTS:

Planting conditions were very good, and the plants emerged strong at the start. This location received some nice showers but remained below average for rainfall. The site was hit with some strong straight-line winds around pollination, and the lodging score reflects the green snap; however, no goose necking could be seen. The plants grew tall, and ear size was all across the board. Some tip back was noted. Disease pressure was seen in the area and impacted the yields. Brent said the two passes and timing of fungicide did make a difference in the yield outcome of fields in the area. Overall, the plot looked good, but once into it, you could really see the stress it received this season.
