HARVESTED - STAND:	Oct 21 31.4 /A
PEST & DISEASE RISK:	Fusarium, Anthracnose*

TEST COMMENTS:

Soil conditions were very good, and this location was no-till, planted into soybean stubble with ease. The plot received very nice rainfall, and the soil fortunately held the moisture, which helped fill the large, girthy ears with large seed size. The plants were still standing firm, even with 20-plus mph winds at harvest. This area also had rust problems, and the timing of the fungicide spray helped keep the yields up. Cobs were sturdy, and shelling was easy with the large ears. There was no weed pressure. Plants were on the short side. Overall, a very nice uniform-looking plot.
