PEST & DISEASE RISK:	Maize White Spot*

TEST COMMENTS:

This location was one of the last planted in the Illinois program into somewhat dry soil conditions, though it received some timely rains when needed. There was good emergence and vegetative growth early on, with healthy plants all season. Lacking rainfall after pollination held back some of the top-end yield in this area. Later in the season, some tar spot and southern rust started to kill off the plants early, but they still maintained some green leaf material and good stalk quality. Despite being planted later, this location performed well given the less-than-ideal growing conditions in recent years.
