TEST COMMENTS:

This corn location was planted in fairly dry soil conditions but started getting timely rains shortly after. Wonderful emergence with a very even and consistent stand was seen in the early season. Excellent vegetative growth and superb pollination led to extremely robust stalk quality, root structure, and great ear development with cobs filled to the tip. Foliar disease (including black tar spot, gray leaf spot, and common rust) came in late season, leading to very dry leaf material. Some varieties did not dry down as quickly as others in the late season test and some very rubbery cobs were noticed, making shelling somewhat difficult on those particular hybrids.
