TEST COMMENTS:

This location was the first one planted in this region. Soil conditions were excellent at planting with good soil moisture and ideal soil temperature, making for nice emergence. Large planting windows in this area made for a fast spring, Joel said. There was adequate moisture through the early growth stages, but it was very wet in July during pollination, and very dry in August with high temperatures. Excellent stalk quality, still holding large amounts of green in some areas, during harvest. Foliar disease was present but minimal. A small amount of tip-back was seen throughout this location, with otherwise great ear development.
