### TEST COMMENTS:

*This corn location was planted in great soil conditions. Excellent germination and emergence occurred across the plot. There were great growing conditions all season long until late July and August, when the water turned off. Top-end yields were definitely affected by the lack of moisture as well as some fungal disease, mainly southern rust and gray leaf spot, moving into this area. However, stalk quality stayed good, and ear shanks stayed strong despite the very dry plant material at harvest.*
