### TEST COMMENTS:

Planted in fair soil conditions with a wide range of weather patterns afterwards: too wet, too dry, too cold. After emergence, which was spotty at first but became pretty even later, the crop got some heat. Plenty of rain fell here with nearly 22 inches from March until August. High temperatures and humidity in June and July didn't seem to stress the plants much thanks to all the rainfall. August turned dry with some cool temperatures. Heavy disease pressure developed here like southern rust, anthracnose, and gray leaf spot. Zach said fields with no fungicide application stood out and matured a lot faster. Overall, a good crop but not great one, he said.
