TEST COMMENTS:

Do to an unusually wet spring, this no-till location was planted the first week of June in fairly heavy conditions. One day after planting, this location received several days of heavy rain. This had a dramatically negative effect on the emergence of all of the hybrids. Upon inspection, it appeared that the ground was fully saturated for several consecutive days, which caused the kernels to rot before germination. It was determined that this trial wasn't going to be able to be saved. We always have an extra set of packets for replanting the trial, but unfortunately the area stayed saturated for several weeks. The decision was made to scrap this location for this year's growing season.
