HARVESTED - STAND:	Oct 17 32.3 /A
PEST & DISEASE RISK:	Diplodia Ear Rot*

TEST COMMENTS:

Rick told me that planting weather was cool, and his fields received ideal moisture all season long. The weather graph on page 4 backs this up, as it shows 24.9" of rain (24.8" is the long-term average at this site) during the growing season. Corn lodging was minimal here, as it has been at most southern MN sites. Rick did spray a fungicide after tassel, and the plants looked healthy (and fairly green in some plots). One replicate was dropped in the early-season test due to yield variability.
