TEST COMMENTS:

Planted in dry conditions on May 10th, this plot showed great emergence after receiving some rain. Consistent precipitation throughout the season supported healthy, sturdy stalks with excellent root structure and no lodging. Rainfall tapered off by mid-September, leaving the site slightly below average in total accumulation. During harvest, a small amount of tar spot and minor tip-back were observed. Ears were large, well-filled, and stood upright. This was a great location!
