TEST COMMENTS:

This year, farming wasn't a walk in the park in Coleridge. In June severe hail had a major impact on fields, structures, and more. Austin reported severe hail damage in the V5-6 stage of development. In a follow-up visit in mid-July, the plants appeared to have rebounded nicely. Consistent rains brought saturated soils, so the Kochs applied some foliar applications to keep the nutrients boosted and balanced. With timely applications of fungicides, all of this work seemed to pan out nicely as the yields were good. Plants did show signs of black tar spot on the leaves but the stalks were green and the plants stood tall and strong. Test weight and moisture content of the grain were well preserved. A lot of work to fight Mother Nature, but in the end, it seemed to pay off.
