### TEST COMMENTS:

*This site was planted into a clean seedbed and received a shower two days after planting. Corn was growing great at V3, with plenty of soil moisture present. During June and July, this location received several rain events; July had 8 inches of rainfall. August was drier, but moisture in the soil kept the corn growing. September was cooler than normal and brought plenty of rain to help finish the crop out. A fungicide was applied and did help fend off the late outbreak of southern rust.*
