### TEST COMMENTS:

*This plot was in a new location this year, planted on May 13th in very sandy, irrigated soil in great conditions. Emergence was quick and uniform at stand counts. By harvest, the corn stood tall with virtually no lodging. Stalks were thick with excellent root strength and had large, well-filled cobs. A small amount of tar spot was observed, but was minimal throughout the plot. The plot host, Jim, was very pleased with this great-performing plot! One replicate was dropped in the early-season test due to yield variability.*
