HARVESTED - STAND:	Oct 30 29.9 /A
PEST & DISEASE RISK:	Pythium*

TEST COMMENTS:

This location was planted later on May 27th due to prolonged wet conditions. Approximately one month after planting, heavy rainfall caused the nearby creek to overflow, flooding and damaging the back portion of the plot with the full-season hybrids. Conditions turned very dry after late August, adding more stress to the crop. During harvest, some tar spot and fungal disease were observed. Areas unaffected by flooding performed great considering the season's challenges. The full-season test was rejected due to flooded plot damage.
