### TEST COMMENTS:

*This strip-till location was planted on May 7th in favorable conditions. Emergence was strong, and the stand appeared uniform during counts. Rainfall stayed steady through most of the season, and the higher temperatures helped drive the excellent yields seen at harvest. Some tar spot and a small amount of Gibberella ear rot were observed on a few hybrids. Stalks were thick but tended to taper near the top, causing some plants to snap above the ear. Ears were large and well-filled out. Overall, this was a great location to close out the 2025 harvest!*
