TEST COMMENTS:

This soybean location was planted in extremely good soil conditions, with a cool, wet start to the growing season. Emergence was very even and quick from the time of planting. When the plants were scouted in mid-June, the overall location was beautiful with nice and even plants. Late summer turning hot and dry affected some of the fuller season varieties with putting on those extra pods. Despite no fungicide application on these plants, they stayed clean of yield-robbing disease. Green stem and some green leaf material were still present at the time of harvest, and those specific strips were a challenge to harvest.
