TEST COMMENTS:

This plot was planted on April 29th shortly after some rain, which made for ideal planting conditions. The emergence looked great during stand counts in late June. Rainfall was consistent throughout much of the season, resulting in nicely filled out pods and strong stalk structure. Conditions turned very dry from August 20th until harvest. Dakotah did observe some hail damage earlier in the season, and the late-season drought stress limited yield potential with some shatter to be noted. Overall, a great location and plot host!
